

ALBROMET 300 HSC	Data sheet aluminiumbronze
Material properties:	Aluminiumbronze with high compressive strength and comparatively high ductility. Excellent wear resistance and small affinity for stainless steel pick-up. Due to the production process, a notably fine- grained, homogeneous structure is achieved.
Application examples:	Check rail for hardened steel, tools for sheet forming particularly of stainless steel qualities.
Machining tips:	Chip breaking intermixtures, which are superfine spread in the material, improve the machining with carbide tools clearly. That is what the acronym HSC (High Speed Cuttings) means.
Typical analysis:	Al 13,2 % Fe 4,5 % Mn 2,5 % Co 2,5 % Cu Balance
Standards/Specifications:	Not standardized
Delivery formats:	Semi-finished products (Round material and Flat bars), Finished parts according drawing
Mechanical and physical properties:	
Brinell hardness (HB 30)	290 - 320
Tensile strength Rm	> 900 N/mm <sup>2</sup>
Yield strength Rp 0,2	> 350 - 400 N/mm²
Elongation at break A5	> 3 %
Density	7,2 g/cm <sup>3</sup>
Compressive strength	1150 Mpa
Elasticity modulus E Mean linear coefficient of thermal expansion	105,0 KN/mm <sup>2</sup>
Thermal conductivity at 20° C	17,5 10 <sup>-6</sup> /K 42 W/m x k
Electrical conductivity	4 MS/m oder 7 % IACS
Temperature resistance	
Melting range	< 300° C up to the clear change in strength value
Hot forming Relative permeability	1035-1045 °C
	620-730 °C 1,0125 H = 100 Oe

These data are based on information provided by our supplier, all changes reserved. The mechanical strength values are typical standard values and depends on the measurement and the production method. Version 03/2019
